Westcoast Energy · printer colour test

Print at 100% on the paper you use for the brochure, with quality set to High. Compare against the guide at the bottom.

1. Ink patches: each should be strong, even and the right colour

Cyan
bright sky blue

Magenta
hot pink

Yellow
lemon

Black
solid, no streaks

Blue (C+M)
violet blue

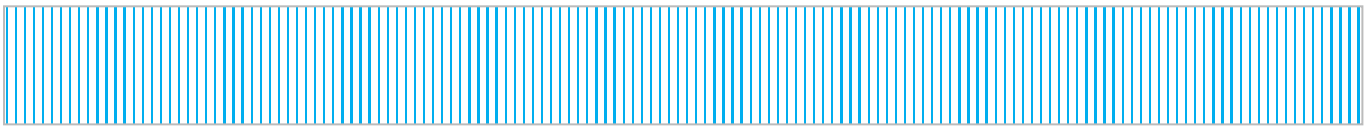

Green (C+Y)
leaf green

Red (M+Y)
red

2. Neutral grey ramp: every step should look grey, with no yellow, brown, pink or green tint

3. Fine cyan lines: should be continuous, with no gaps or banding

4. Westcoast brand colours as used in the brochure

Brand blue
#2C526C · steel blue

Deep navy
#1B2B38 · near black blue

Soft grey
#D1D9DC · cool, slightly blue

Off-white
#F2F0EA · warm white

What the result means

Greys look yellow, tan or brown	Cyan (and possibly magenta) is low or a nozzle is blocked. This is what your brochure prints show.
Greys look pink or red	Cyan is low.
Greys look green	Magenta is low.
Greys look blue or purple	Yellow is low.
A patch is faint, streaky or missing	Run the printer's head cleaning, then a nozzle check. Replace the cartridge if it does not recover after two cleans.
Everything looks right here but the brochure still looks off	Check the print settings: paper type should match your paper, quality High, and any "ink saver" or "draft" mode switched off.
